

Truly Informed Consent Checklist for Pfizer BioNTech Injections for Children

A “Vaccine” Injury Prevention Project

by Diane Perlman, Ph.D.

“... we’re never going to learn about how safe this vaccine is unless we start giving it.”

– **Professor Eric Rubin of Harvard University**, testifying before FDA’s Vaccines and Related Biological Products Advisory Committee (VRBPAC), October 26, 2021, on myocarditis and deaths, before voting to approve.

Watch at: https://www.youtube.com/watch?app=desktop&v=laaL0_xKmmA

Are you accurately informed? Brief scrutiny can prevent a lifetime of regret.

Children are incapable of informed consent. Many parents are not informed and delegate their responsibility to the CDC, the school, or other authorities despite fraudulent safety studies, whistleblower testimony, incomplete and falsified data, censored expert warnings, danger signals on VAERS reports, absence of long-term data and public comments urging FDA and CDC committee members to vote against approval.

What you don’t know can hurt your child. Do not delegate your responsibility to anyone You owe it to your child to be fully informed about short and long-term safety *before* injecting them with mRNA, which has polyethylene glycol and undisclosed ingredients. There is *no* data on interactions with other vaccines. No party has any liability for adverse reactions, as occurred with 5 - 17-year-olds. **“If your child is injured by a COVID vaccine, you will never forgive yourself.”** Meryl Nass, MD

The **Nuremberg Code**, the most important human rights document on medical ethics states, **“The voluntary consent of the human subject is absolutely essential.** ... the person involved should have legal capacity to give consent; should ... be able to exercise free power of choice, without the intervention of any element of force, fraud, deceit, duress, over-reaching, or other ulterior form of constraint or coercion, and should have sufficient knowledge and comprehension ... to make an understanding and enlightened decision ... there should be made known to him ... the effects upon his health or person which may possibly come from his participation in the experiment.”

Do not be manipulated by fear and false information. Pfizer BioNTech mRNA shots do not prevent infection or transmission. New data shows they may increase rates of infection and after several months. Healthy children have preexisting, innate, immune effector cells. Their immune systems handle Covid better than adults, with practically zero risk of dying. They usually do not transmit to adults. Most have no or mild symptoms and achieve enduring, robust natural immunity, superior to “vaccine” immunity which wanes over time. Natural immunity contributes to herd immunity. The Amish reached herd immunity in 3 months without lockdowns, distancing or masks, as have others. “Mass vaccination campaigns in children will prevent them from contributing to herd immunity” and might provoke “more infectious viral variants.” -Dr. Geert Vanden Bossche, DVM, PhD. This warning interview explains the science:

<https://thehighwire.com/videos/vaccine-expert-warns-of-covid-vaccination-catastrophe/>. mRNA shots alter their immune systems. Continuing booster shots may cause immune exhaustion.

Children with Covid rarely require treatment. If they do, effective protocols that have been censored, developed in international collaboration by independent, ethical doctors are on

<https://covid19criticalcare.com> and other places. Many “vaccine” injuries are new to doctors and more challenging to treat than Covid. Boost everyone’s immunity with a healthy diet, sunlight, adequate Vitamin D levels, zinc, C, A, melatonin, etc. to reduce severity.

Risk/Benefit Analysis. Older people with co-morbidities have the highest risk from Covid. Healthy, younger people have virtually zero risk from Covid. Risks from the “vaccines” increase with decreasing age. The very few children who died *with* Covid, not *from* Covid, had serious illnesses like leukemia, cystic fibrosis, diabetes, and obesity. Healthy children have little benefit, only harm from Covid shots, which undermine their effective innate immunity, subject them to boosters and render them more vulnerable.

Do not act under pressure or be controlled by fear. Not from authorities, peers or your children’s peers. Do your own research. **Think for yourself.** You will bear the consequences. Challenge the reasons for making social life contingent on getting the shots. These are manipulative forms of coercion, though they seem plausible. **The best defense against any virus is a strong, healthy immune system.**

TRULY INFORMED CONSENT CHECKLIST

Any person who gives consent to a medical procedure for themselves or their dependents must be informed of ALL the known or potential adverse effects of the treatment. If they have not been FULLY INFORMED those responsible for obtaining consent are guilty of malpractice. (Gary Kohls, MD)

- 1. Yes__ No __** I agree to allow my child to receive the Pfizer BioNTech mRNA injection knowing that there is no reliable safety data and that they will be participating in a medical experiment, which requires *fully* informed consent according to the Nuremberg Code.
- 2. Yes__ No __** I am informed that mRNA injections are technically not “vaccines.” They are genetic interventions never used before on humans and based on insufficient animal studies. Immunity wanes over time, does not prevent infection or transmission, and requires boosters. Impacts may be irreversible.
- 3. Yes__ No __** I am informed that no FDA fully approved Covid shot is available in the US.
- 4. Yes__ No __** I am informed that the FDA and CDC approved of the Pfizer mRNA injections to children based on an Emergency Use Authorization (EUA), even **though there is no emergency for children.**
- 5. Yes__ No __** I am informed that most children who get Covid have mild symptoms, if any, and acquire superior, robust and enduring natural immunity shown to persist for many years or a lifetime and is effective against variants. T-cell tests demonstrate natural immunity whether or not there are also antibodies.
- 6. Yes__ No __** I am informed that about 58% with superior natural have *no* benefit from mRNA shots and have 3 – 6 times higher risk of adverse reactions to the shots, including death.

7. Yes__ No __ I am informed that the Pfizer mRNA shots instruct the cells to manufacture spike proteins with no controls, that circulate through the body and lodge in the organs, in high concentrations in the endothelial cells, ovaries and testes, spleen, heart, and cross the blood-brain barrier.

8. Yes__ No __ I am informed that documented adverse reactions caused by mRNA shots include anaphylactic shock, allergic reactions, blood clotting, micro-clotting and other bleeding disorders, thrombosis in the brain, other thrombotic events, myocarditis, pericarditis, heart damage, stroke, tinnitus, vertigo, death, and more.

9. Yes__ No __ I am informed that if one has adverse reactions after the first shot, they must not get the second under any circumstances, and that more severe reactions and deaths occur after the second shot.

10. Yes__ No __ I am informed that mRNA shots pose an elevated risk of myocarditis, highest in young males, causing permanent heart damage and death, as well as heart attacks and strokes, including among healthy athletes. My child will be part of a medical experiment on myocarditis in this age group.

11. Yes__ No __ I am informed that some countries halted mRNA injections in children due to myocarditis.

12. Yes__ No __ I am informed that long-term effects over weeks, months, years or decades are unknown. They may include antibody dependent enhancement, autoimmune diseases, neurodegenerative disorders, heart problems, thrombotic conditions, prion disease and an increase in chronic diseases and reproductive harms including infertility and shortened lifespan.

Basis for approval for Emergency Use Authorization

13. Yes__ No __ I am informed that many voting committee members have financial ties to Pfizer and go through revolving doors with government agencies and lobbyists and Big Pharma, the biggest lobby, has more lobbyists than congress members. Pfizer will enormously profit from approval.

14. Yes__ No __ I am informed that “safety” studies *were conducted by Pfizer* and not by independent scientists. Contradictory data from independent scientists and other countries is ignored or censored.

15. Yes__ No __ I am informed that Pfizer’s studies were rushed, methodologically flawed, conducted on very few subjects, followed for a very short time, and incapable of picking up signals for adverse reactions. Pfizer controlled, cherry picked and withheld data, including elimination of subjects who had adverse reactions to the first or second dose. Pfizer is being investigated for falsification of data, failure to investigate adverse reactions, and more.

16. Yes__ No __ I am informed that adverse reactions other than fever, chills, headaches, soreness and fatigue were not recorded and that subjects who had serious adverse reactions were eliminated from the study. Their reactions were minimized, dismissed and/or misdiagnosed as psychological or coincidences.

17. Yes__ No __ I am informed that based on studies on 5 – 17-year-olds, it is a statistical certainty that there will be adverse reactions, injuries, disabilities, trauma and deaths among 6 months – 4 year-olds.

18. Yes__ No __ I am informed that this approval is necessary for Pfizer to get this shot on CDC’s childhood vaccine schedule in order avoid full legal liability for injuries and deaths.

19. Yes__ No __ I am informed that health economists estimate of the risk/benefit analysis of the Number Needed to Vaccinate (NNTV) concludes that **“For every one child saved by the shot, another 117 would be killed by the shot.”** <https://tobyrogers.substack.com/p/what-is-the-number-needed-to-vaccinate>
